| Project: | New Primary Data Centre |
| Customer Remit: | To create within the new facility an infrastructure that was not only future proof but capable and reliable enough to run applications that handle the core business and operational data of the council. |
| Summary: | <p>East Ayrshire Council is no different from any other council in Scotland or indeed the UK were they rely on their IT systems to run their day to day operations. If this system becomes unavailable or compromised the council's capability of maintaining full operation may be impaired or stopped completely.</p> <p>It is necessary to provide a reliable infrastructure for IT operations, in order to minimize any chance of disruption. SSCL worked very closely with the councils IT department on the project, from design to commission to ensure the high standards and the correct outcome was achieved. The install incorporated the latest that the industry has to offer in the form of Systimax Cat6a copper cable and Systimax Lazer-speed fibre optic cable along with state of the art cold aisle containment from Cannon.</p> |
| Conclusion: | This work is one of SSCL's flagship installs and was completed December 2010. |
